

# GARDEN 24 Ljussensor/Timer 106936

## Technical Data

Voltage	24V
IP Class	IP 44

### Note:

1. Device not flashing means light sensor start to work;
2. Device in slow flash means light sensor is off;
3. Device in fast flash 3 times means light sensor is in Timer function;
4. Disable the Timer function by setting the timer to '00'. Here the light will be on at dusk and off at dawn.
5. Disable the light sensor function by setting the timer to '24'. Here the light will stay on until manually turn off.

### How to set the timer:

- ① Connect to the transformer and lamps ;
- ② Turn on the light sensor( the light sensor will start to work if the screen not flashing) ;
- ③ Press down '-' or '+' button to set the timer (Set how many hours you need and then setting is done)
- ④ When the illuminance  $\leq 20 \pm 10$  LUX, the lamp will turn on and timer start to count down (Device in fast flash 3 times); the timer stops working until the lamp turning off;
- ⑤ Set hours to '24' so that lamp keeps turning on.
